REFERENCE

Hereby we confirm that on 28th of January 2010 SIA “SolSanno” represented by its director Jānis Sīklis did perform the demonstration of Magnum Spill Buster System manufactured by Clean Earth Technology (USA). During the test of Magnum Spill Buster System the ambient air temperature was -11 degrees Celsius and it was not a problem for Magnum System to operate and to pump out the floating oil product from the monitoring well at SIA ““Ventspils nafta” termināls”. Also in such stringent conditions Magnum Spill Buster System was operating excellent and did perform the task. We are satisfied with demonstration results because Magnum Spill Buster System was pumping only oil related product and did not pump the water at all as guaranteed by the manufacturer Clean Earth Technology.

Vjaceslav Vernuk,
Technical Director
SIA ““Ventspils nafta” termināls”
